

## YOUR RESOURCE FOR DATA & NETWORKING SECURITY

### Our Business Critical Solutions Approach:

**Improve Security:** Lack of employee awareness and inability to respond to breaches in security has proven to be one of the weakest links in a company's information security program. LCM Security provides assessments, support, training and maintenance services to assist management with their interpretation and response to strengthen the overall posture of your security program.

**Simplify Compliance:** Complex and misaligned relationships between individual business units and their technology needs are a main reason why policy and procedure is one of the most common areas for audit failure. LCM Security's cross-compliance mapping methodology will identify and correct these issues and simplify your compliance process.

**Optimize Performance:** Whether your company's information security program is managed internally or is outsourced, on average 70% of the program can be automated through the use of technology and effective design. By properly engineering your security program and introducing new technologies LCM can optimize the performance of your infrastructure and the availability of electronic data.

### Life Cycle Management Security Offerings:

- \* Firewall & VPN Solutions
- \* Anti-Virus & Anti-Spam Solutions
- \* Risk Management & Reporting
- \* End-Point Security

- \* Policy Management
- \* Intrusion Protection / IDP
- \* Data Protection
- \* Virtualization Security

- \* Encryption Solutions
- \* Managed Security Solutions
- \* Infrastructure Optimization
- \* Secure Network Access

PERIMETER SECURITY | DATA PROTECTION | INTEGRATION & SUPPORT | PERFORMANCE OPTIMIZATION

LCM Security is Your Resource For:

**Network Security Design & Implementation Services** | Making sure your security infrastructure is designed well and does not impact performance of the network or other business processes is critical.

Our goal is to ensure your security infrastructure is optimized and configured correctly. Our experienced engineers work with your staff either onsite or remotely to ensure you are getting value from your investment and to transfer critical knowledge which will help your staff become more efficient.

**Supplementary Support Assistance** | A critical aspect of getting quality support is the vendor's understanding of your network infrastructure.

Since most vendors do not take the time to develop a good understanding of your organization's environment, our clients find significant value in the amount of time we invest to better understand your overall environment and how the various security technologies interact with it. Many of our clients utilize us as their first or second tier level support because of our understanding of their network and the technologies, as well as our responsiveness. Furthermore, since we are strategic partners with many of the security vendors we can also assist in the escalation of product issues. Our experienced engineers are always on call to quickly respond to customer issues and ensure the optimization of your business infrastructure.

**Training & Knowledge Transfer** | Training offerings encompass traditional classroom training on various security technologies.

They also include mentoring and knowledge transfer services on basic security concepts and specific security technologies as well as a User-Awareness training product that ensures all your employees understand your security policies and their roles in securing the company's corporate information and assets.

**Compliance & Risk Management** | Business partners and subject matter experts that provide valuable insight into applicable compliance issues, mandated by industry specific and government regulations.

Our experts assess internal and external security vulnerabilities, identify the gap between the current state and the regulatory requirement, make common sense recommendations to bridge the gap and align with your business process and then we assist in the implementation of administrative and technical remediation.

#### Perimeter Security & VPN

Fortinet Technologies UTM  
Juniper Networks  
Vasco Strong Authentication

#### Risk Management & Reporting

AdventNet  
eIQ Networks

#### Data Protection

Varonis Data Governance
